## Overview

Electropneumatic positioner SIPART PS2 in the aluminum enclosure

SIPART PS2 electropneumatic positioner in flameproof aluminum enclosure with manometers

SIPART PS2 in stainless steel enclosure with manometers

The SIPART PS2 electropneumatic positioner is used to control the final control element of pneumatic linear or part-turn actuators. The electropneumatic positioner moves the actuator to a valve position corresponding to the setpoint. Additional function inputs can be used to block the valve or to set a safety position. A binary input is present as standard in the basic device for this purpose.

## Benefits

SIPART PS2 positioners offer decisive advantages:

- Simple installation and automatic commissioning (self-adjustment of zero and span)
- Simple operation with
  - Local operation (manual operation) and configuration of the device using three buttons and a user-friendly two-line display
  - Parameterization via SIMATIC PDM
- Very high-quality control thanks to an online adaptation procedure
- Negligible air consumption in stationary operation
- "Tight closing" function (ensures maximum positioning pressure on the valve seat)
- "Fail in place" function: Current position is retained on failure of auxiliary electrical power and/or pneumatic failure (does not apply in conjunction with SIL).

Example: For an actuator with a volume of 8 liters, the typical position stability of a SIPART PS2 with "Fail in Place" is 0.3 % per hour.

- Numerous functions can be activated by simple configuring (e. g. characteristic curves and limits)
- Extensive diagnostic functions for valve and actuator
- Only one device version for linear and part-turn actuators
- Few moving parts, hence insensitive to vibrations
- External non contacting sensor as option for extreme ambient conditions
- "Intelligent solenoid valve": Partial Stroke Test and solenoid valve function in one device
- Partial Stroke Test e. g. for safety valves
- Full Stroke Test, Multi Step Response Test, Valve Performance Test for performance and maintenance evaluation of the valve
- Can also be operated with purified natural gas, carbon dioxide, nitrogen or noble gases
- SIL (Safety Integrity Level) 2

## Application

The SIPART PS2 positioner is used, for example, in the following industries:

- Chemical/petrochemical
- Power stations
- Paper and glass
- Water, waste water
- Food and pharmaceuticals
- Offshore plants

The SIPART PS2 positioner can be used with all pneumatic actuators and is available for delivery:

- In various enclosure designs and various materials (Makrolon, aluminum, and stainless steel)
- For non-hazardous applications
- For hazardous applications in the versions
  - Intrinsic safety type of protection
  - Flameproof enclosure type of protection
  - Non-sparking type of protection
  - Dust protection by enclosure type of protection

and in the versions:

- With 0/4 ... 20 mA control with/without communication through HART signal
- With PROFIBUS PA communication interface
- With FOUNDATION Fieldbus (FF) communications interface

## Positioners

### SIPART PS2

#### Technical description

##### Explosion-proof versions

- Device with protection type "intrinsic safety" for use in Zone 1, 2, 21, 22 or Class I, II, III/Division 1/Groups A-G
- Device with protection type "dust protection with enclosure" for use in Zone 21, 22 or Class II, III/Division 1/Groups E-G
- Device with protection type "non-sparking" for use in Zone 2 or Class I, Division 2, Groups A-D
- Device with protection type "flameproof enclosure" for use in Zone 1 or Class I, Division 1, Groups A-D

##### Stainless steel enclosure for extreme ambient conditions

The SIPART PS2 is available in a stainless steel enclosure (with no window in the cover) for use in particularly aggressive environments (e.g. offshore operation, chlorine plants etc.). The device functions are the same as for the basic version.

#### Design

The SIPART PS2 positioner is a digital field device with a highly-integrated microcontroller.

The positioner consists of the following components:

- Enclosure and cover
- PCB with corresponding electronics with or without communication through HART 7 or with electronics for communication in accordance with - PROFIBUS PA specification, IEC 61158-2; bus-supplied device, or - FOUNDATION Fieldbus (FF) specification, IEC 61158-2, bus-supplied device
- Position detection system
- Terminal housing with screw terminals
- Pneumatic valve manifold with piezoelectric valve precontrol.

The valve manifold is located in the housing, the pneumatic connections for the inlet air and the positioning pressure on the right-hand side. A pressure gauge block and/or a safety solenoid valve can be connected there as options. The SIPART PS2 positioner is fitted to the linear or part-turn actuator using an appropriate mounting kit. The circuit board container in the casing provides slots for separately ordered boards with the following functions:

##### Position feedback module

- Position feedback as a two-wire signal 4 to 20 mA

##### Alarm module (3 outputs, 1 input)

- Signaling of two limits of the travel or angle by binary signals. The two limits can be set independently as maximum or minimum values.
- Output of an alarm if the setpoint position of the final control element is not reached in automatic mode or if a device fault occurs.
- Second binary input for alarm signals of for triggering safety reactions, e. g. blocking function or safety position.

##### Limit signaling through slot-type initiators (SIA module)

Two limits can be signaled redundantly as NAMUR signals (EN 60947-5-6) by slot-type initiators. An alarm output is also integrated in the module (see "Alarm Module").

##### Limit value signal via mechanical contacts (mechanical limit switch module)

Two limits can be signaled redundantly by switching contacts. An alarm output is also integrated in the module (see "Alarm Module").

Valid for all modules described above:

All signals are electrically isolated from one another and from the basic unit. The outputs indicate self-signaling faults. The modules are easy to retrofit.

##### Separate mounting of position detection system and controller unit

The position detection system and controller unit can be connected separately for all casing versions of the SIPART PS2 (except flameproof design). Measurement of the travel or angle is carried out directly on the actuator. The controller unit can then be fitted a certain distance away, e. g. on a mounting pipe or similar, and is connected to the position detection system by an electric cable and to the actuator by one or two pneumatic lines. Such a split design is frequently advantageous if the ambient conditions at the fitting exceed the specified values for the positioner (e. g. strong vibrations).

The following can be used for measuring the travel or angle:

- NCS sensor
- External position detection system C73451-A430-D78
- A commercially available potentiometer (10 k $\Omega$  resistance), e. g. for higher application temperatures or customer-specific applications

The use of potentiometers is recommended for very small linear actuators with a short valve travel since, on the one hand, the space required by the potentiometer is very small and, on the other, the transmission characteristic is optimum for a small travel.

Separate mounting of position detection system and controller unit

##### Non contacting sensor (NCS)

NCS for part-turn actuator (6DR4004-N.10) mounted with mounting console (left) and NCS for linear actuator  $\leq$  14 mm (0.55 inch) (6DR4004-N.20) mounted with actuator-specific mounting solution (right)

NCS (6DR4004-.N.30) for travels > 14 mm (0.55 inch) mounted using mounting kit for NAMUR linear actuator

The NCS sensor consists of a non-contacting position sensor. All coupling elements are omitted such as coupling wheel and driver pin with part-turn actuators or lever and pick-up bracket with linear actuators for up to 14 mm travel.

This results in:

- Even greater resistance to vibration and shock
- No wear of sensor
- Problem-free mounting on very small actuators
- Negligible hysteresis with very small travels.

The sensor does not require an additional power supply, i. e. SIPART PS2 (not for Ex d version) can be operated in a 2-wire system. The NCS (Non Contacting Sensor) consists of a potted sensor housing which must be mounted permanently and a magnet which is mounted on the spindle of linear actuators or on the shaft butt of part-turn actuators. For the version for travels > 14 mm (0.55 inch), the magnet and the NCS are premounted on a stainless steel frame and offer the same interface mechanically as the positioner itself, i. e. they can be mounted using the standard mounting kits 6DR4004-8V, -8VK and -8VL.

The installation of a EMC filter module in the positioner (controller unit) is necessary in order to ensure a connection level with EMC according to EC Declaration of Conformity when using external sensors (see "Selection and Ordering Data", "EMC Filter Module").

## Function

The SIPART PS2 positioner works in a completely different way to normal positioners.

### Mode of operation

Comparison of the setpoint and the actual value takes place electronically in a microcontroller. If the microcontroller detects a deviation, it uses a 5-way switch procedure to control the piezoelectric valves, which regulates the flow of air into and from the chambers of the pneumatic actuator or blows it in the opposite direction.

The microcontroller then outputs an electric control command to the piezoelectric valve in accordance with the size and direction of the deviation (deviation between setpoint and actual values). The piezoelectric valve converts the command into a pneumatic positional increment.

The positioner outputs a continuous signal in the area where there is a large system deviation (fast step zone); in areas of moderate system deviation (slow step zone) it outputs a sequence of pulses. No positioning signals are output in the case of a small system deviation (adaptive or variable deadband).

The linear or rotary motion of the actuator is detected by the mounting kit and transferred to a high-quality potentiometer over a shaft and a non-floating gear transmission.

The angular error of the pick-up in cases where the assembly is mounted on a linear actuator is corrected automatically.

When connected in a 2-wire system, the SIPART PS2 draws its power exclusively from the 4 to 20 mA setpoint signal. The electric power is also connected through the 2-wire bus signal with PROFIBUS operation (SIPART PS2 PA). The same applies for the FOUNDATION Fieldbus version.

### Pneumatic valve manifold with piezoelectric valve precontrol

The piezoelectric valve can release very short control pulses. This helps achieve a high positioning accuracy. The pilot element is a piezoelectric bending converter which switches the pneumatic main controller unit. The valve manifold is characterized by an extremely long service life.

### Local operation

Local operation is performed using the built-in display and the three buttons. Switching between the operating levels Automatic, Manual, Configuring and Diagnosis is possible at the press of a button.

In manual mode the drive can be adjusted over the entire range without interrupting the circuit.

### Operation and monitoring with the SIMATIC PDM configuration software

The configuration software SIMATIC PDM permits simple operation, monitoring, configuration and parameterization of the device. The diagnostic information available can be read via SIMATIC PDM from the device. Communication is carried out via the HART protocol or PROFIBUS PA. For the HART protocol, the device can be accessed both via a HART modem and via a HART-compatible input/output module (remote IO). The corresponding device description files, such as GSD and (Enhanced) EDD are available for both types of communication.

In addition, the SITRANS DTM provides software based on tried and tested EDD technology that can be used to parameterize field devices via a DTM (Device Type Manager) using an FDT frame application (e. g. PACTware). SITRANS DTM and the necessary device-specific enhanced EDD are available for download free of charge. The software provides the relevant communication interfaces for HART and PROFIBUS.

### Automatic commissioning

With a simple configuration menu the SIPART PS2 can be quickly adapted to the fitting and adjusted by means of an automatic startup function.

During initialization, the microcontroller determines the zero point, full-scale value, the direction of action and the positioning speed of the fitting. From this data it establishes the minimum pulse time and the deadband, thus optimizing the control.

### Low air consumption

A hallmark of the SIPART PS2 is its own extremely low consumption of air. Normal air losses on conventional positioners are very costly. Thanks to the use of modern piezoelectric technology, the SIPART PS2 consumes air only when it is needed, which means that it pays for itself within a very short time.

## Positioners

### SIPART PS2

#### Technical description

##### **Comprehensive monitoring functions**

The SIPART PS2 has various monitoring functions with which changes on the actuator and valve can be detected and signaled if applicable when a selectable limit has been exceeded. This information may be important for diagnosis of the actuator or valve. The measuring data to be determined and monitored, some of whose limits can be adjusted, include:

- Travel integral
- Number of changes in direction
- Alarm counter
- Self-adjusting deadband
- Valve end limit position (e. g. for detection of valve seat wear or deposits)
- Operating hours (also according to temperature and travel ranges) as well as min./max. temperature
- Operating cycles of piezoelectric valves
- Valve positioning time
- Actuator leakages

##### **At a glance with the Diagnostics Cockpit**

With the Diagnostics Cockpit, the HART variants of the SIPART PS2 provide a straightforward way of getting started with the world of diagnostic capabilities. All relevant information (set-point, actual value, control deviation, status of the diagnostic system, etc.) of the valve is available at a glance. Additional facts and details are just a few mouse clicks away from the Diagnostics Cockpit.

##### **Status monitoring with 3-stage alarm concept**

The intelligent electropneumatic SIPART PS2 positioner is equipped with additional monitoring functions. The status indications derived from these monitoring functions signal active faults of the unit. The severity of these faults are graded using "traffic light signaling", symbolized by a wrench in the colors green, yellow and red (in SIMATIC PDM and Maintenance Station):

- Need for maintenance (green wrench)
- Urgent need for maintenance (yellow wrench)
- Imminent danger of unit failure or general failure (red wrench)

This allows users to put early measures into action before a serious valve or actuator fault occurs which could result in a system shutdown. The fact that a fault indication is signaled, such as the onset of a diaphragm break in the actuator or the progressive sluggishness of a unit, enables the user to ensure system reliability at any time by means of suitable maintenance strategies.

This three-stage alarm hierarchy also allows early detection and signaling of other faults, such as the static friction of a packing box, the wearing of a valve plug/seating, or precipitations or incrustations on the fittings.

These fault indications can be output either line-conducted over the alarm outputs (see above) of the positioner (max. 3), or via communication over the HART or field bus interfaces. In this case, the HART, PROFIBUS and FF versions of SIPART PS2 permit a differentiation of the various fault indications, as well as a trend representation and histogram function of all key process variables with regard to the fittings.

The device display also displays the graded maintenance requirements, complete with identification of the source of the fault.

##### **Maintenance required for valve**

The Full Stroke Test, Step Response Test, Multi Step Response Test and Valve Performance Test provide detailed information about the maintenance required of the valve. With the help of HART communication, you receive comprehensive test results and can identify the extent of the maintenance measures. In order to quantify the performance capability of valves, characteristic values such as step response times (T63, T86, user-selectable Txx), dead times, overshoot, hysteresis, errors of measurement, non-linearity, etc., are determined.

##### **Functional safety acc. to SIL2**

The positioner is suitable for use on valves that satisfy the special requirements in terms of functional safety up to SIL 2 in accordance with IEC 61508 or IEC 61511. The variants 6DR5.1.-0.....-Z C20 are available for this.

These are single-acting positioners for mounting on pneumatic actuators with spring return.

The positioner vents the valve actuator on demand/in the event of a fault and puts the valve in the preset safety position.

This positioner meets the following requirement:

- Functional safety up to SIL 2 in accordance with IEC 61508 or IEC 61511 for safe venting.

##### **SIPART PS 2 as "intelligent solenoid valve"**

Open/Close valves, safety fittings in particular, are generally pneumatically controlled over a solenoid valve. If you use SIPART PS2 instead of this type of solenoid valve, the positioner performs two tasks in a single device (without extra wiring)

- Firstly, it switches the fitting off on demand by venting the actuator (functional safety acc. to SIL 2 (see above))
- Secondly, it can perform a Partial Stroke Test at regular intervals (1 - 365 days), which prevents the blocking of the fitting, e. g. due to corrosion or encrustation.

As in this case SIPART PS2 is constantly working in normal operation (e. g. 99 % position), it also acts as a permanent test function for the pneumatic output circuit, which is not usually possible when using a solenoid valve.

Solenoid valves on control valves can also not normally be tested during operation. They are therefore not necessary when using SIPART PS 2 with a 4-wire connection system as the venting is carried out on demand by SIPART PS2. This means that on control valves, both the control function and the shut-off function can be carried out by a single device.

**Configuring**

In configuring mode, the SIPART PS2 positioner can be configured to requirements and include the following settings:

- Input current range 0 to 20 mA or 4 to 20 mA
- Rising or falling characteristic curve at the setpoint input
- Positioning speed limit (setpoint ramp)
- Splitrange operation; adjustable start-of-scale and full-scale values
- Response threshold (deadband); self-adjusting or fixed
- Direction of action; rising or falling output pressure with rising setpoint
- Limits (start-of-scale and full-scale values) of positioning range
- Limits (alarms) of the final control element position; minimum and maximum values
- Automatic "tight closing" (with adjustable response threshold)
- The travel can be corrected in accordance with the valve characteristic curve.
- Function of binary inputs
- Function of alarm output etc.

Configuration of the various SIPART PS2 versions is largely identical.

Analog-to-digital converter			
<ul style="list-style-type: none"> <li>Scan time</li> <li>Resolution</li> <li>Transmission error</li> <li>Temperature influence effect</li> </ul>	10 ms ≤ 0,05 % ≤ 0,2 % ≤ 0.1 %/10 K (≤ 0.1 %/18 °F)		
<b>Certificates and approvals</b>			
Classification according to pressure equipment directive (PED 2014/68/EU)	For gases of fluid group 1, complies with requirements of article 3, paragraph 3 (sound engineering practice SEP)		
CE conformity	You can find the appropriate directives and standards, including the relevant versions, in the EC Declaration of Conformity on the Internet.		
UL conformity	You can find the appropriate directives and standards, including the relevant versions, in the UL-CERTIFICATE OF COMPLIANCE on the Internet.		

- 1) Max. impact energy 1 Joule for enclosure with inspection window 6DR5..0 and 6DR5..1 or max. 2 Joule for 6DR5..3.
- 2) At ≤ -10 °C (≤ 14 °F) the display refresh rate of the indicator is limited. When using position feedback module, only T4 is permitted.
- 3) The following applies to order suffix (order code) -Z M40: -40 ... +80 °C (-40 ... +176 °F).
- 4) The following applies to fail in place: 3 ... 7 bar (43.5 ... 101.5 psi).
- 5) With Ex d version (6DR5..5-...) values are reduced by approx. 20 %.

## SIPART PS2

### Technical specifications

#### SIPART PS2 with and without HART

	Basic electronics without Ex protection	Basic electronics with Ex d explosion protection	Basic electronics with "ia" explosion protection	Basic electronics with explosion protection "ic", "nA", "t"
<b>Electrical specifications</b>				
Current input $I_W$				
• Rated signal range			0/4 ... 20 mA	
• Test voltage			840 V DC, 1 s	
• Binary input BIN1 (terminals 9/10; electrically connected to the basic device)		Suitable only for floating contact; max. contact load < 5 $\mu$ A at 3 V		
2-wire connection (terminals 6/8) 6DR50.. and 6DR53.. without HART 6DR51.. and 6DR52.. with HART				
Current to maintain the auxiliary power supply		$\geq 3.6$ mA		
Required load voltage $U_B$ (corresponds to $\Omega$ at 20mA)				
• Without HART (6DR50..)				
- Typical	6.36 V (= 318 $\Omega$ )	6.36 V (= 318 $\Omega$ )	7.8 V (= 390 $\Omega$ )	7.8 V (= 390 $\Omega$ )
- max.	6.48 V (= 324 $\Omega$ )	6.48 V (= 324 $\Omega$ )	8.3 V (= 415 $\Omega$ )	8.3 V (= 415 $\Omega$ )
• Without HART (6DR53..)				
- Typical	7.9 V (= 395 $\Omega$ )	-	-	-
- max.	8.4 V (= 420 $\Omega$ )	-	-	-
• With HART (6DR51..)				
- Typical	6.6 V (= 330 $\Omega$ )	6.6 V (= 330 $\Omega$ )	-	-
- max.	6.72 V (= 336 $\Omega$ )	6.72 V (= 336 $\Omega$ )	-	-
• With HART (6DR52..)				
- Typical	-	8.4 V (= 420 $\Omega$ )	8.4 V (= 420 $\Omega$ )	8.4 V (= 420 $\Omega$ )
- max.	-	8.8 V (= 440 $\Omega$ )	8.8 V (= 440 $\Omega$ )	8.8 V (= 440 $\Omega$ )
• Static destruction limit	$\pm 40$ mA	$\pm 40$ mA	-	-
Effective internal capacitance $C_i$				
• Without HART	-	-	11 nF	"ic": 11 nF
• With HART	-	-	11 nF	"ic": 11 nF
Effective internal inductance $L_i$				
• Without HART	-	-	207 $\mu$ H	"ic": 207 $\mu$ H
• With HART	-	-	310 $\mu$ H	"ic": 310 $\mu$ H
For connecting to circuits with the following peak values	-	-	$U_i = 30$ V $I_i = 100$ mA $P_i = 1$ W	"ic": $U_i = 30$ V $I_i = 100$ mA "nA"/"t": $U_n \leq 30$ V $I_n \leq 100$ mA
3-/4-wire connection (terminals 2/4 and 6/8) 6DR52.. with HART, explosion-protected 6DR53.. without HART, not explosion-protected)				
Load voltage at 20 mA	$\leq 0.2$ V (= 10 $\Omega$ )	$\leq 0.2$ V (= 10 $\Omega$ )	$\leq 1$ V (= 50 $\Omega$ )	$\leq 1$ V (= 50 $\Omega$ )
Power supply $U_H$	18 ... 35 V DC	18 ... 35 V DC	18 ... 30 V DC	18 ... 30 V DC
Current consumption $I_H$			$(U_H - 7.5 \text{ V})/2.4 \text{ k}\Omega$ [mA]	
Effective internal capacitance $C_i$	-	-	22 nF	"ic": 22 nF
Effective internal inductance $L_i$	-	-	0.12 mH	"ic": 0,12 mH
For connecting to circuits with the following peak values	-	-	$U_i = 30$ V DC $I_i = 100$ mA $P_i = 1$ W	"ic": $U_i = 30$ V $I_i = 100$ mA "nA"/"t": $U_n \leq 30$ V $I_n \leq 100$ mA
Electrical isolation	between $U_H$ and $I_W$	between $U_H$ and $I_W$	between $U_H$ and $I_W$ (2 intrinsically safe circuits)	between $U_H$ and $I_W$
<b>HART communication</b>				
HART version			7	
PC parameterization software	SIMATIC PDM; supports all device objects. The software is not included in the scope of delivery.			

**SIPART PS2 with PROFIBUS PA/with FOUNDATION Fieldbus**

	Basic electronics without Ex protection	Basic electronics with Ex d explosion protection	Basic electronics with "ia" explosion protection	Basic electronics with explosion protection "ic", "nA", "t"
<b>Electrical specifications</b>				
<u>Power supply, bus circuit</u>				
Bus voltage	9 ... 32 V	9 ... 32 V	9 ... 24 V	9 ... 32 V
Bus-supplied				
For connecting to circuits with the following peak values				
• Bus connection with FISCO supply unit			$U_i = 17.5 \text{ V}$ $I_i = 380 \text{ mA}$ $P_i = 5.32 \text{ W}$	"ic": $U_i = 17.5 \text{ V}$ $I_i = 570 \text{ mA}$ "nA"/"t": $U_n \leq 32 \text{ V}$
• Bus connection with barrier			$U_i = 24 \text{ V}$ $I_i = 250 \text{ mA}$ $P_i = 1.2 \text{ W}$	"ic": $U_i = 32 \text{ V}$ "nA"/"t": $U_n \leq 32 \text{ V}$
Effective internal capacitance $C_i$	-	-	Negligibly	Negligibly
Effective internal inductance $L_i$	-	-	8 $\mu\text{H}$	"ic": 8 $\mu\text{H}$
Current consumption			11.5 mA $\pm$ 10 %	
Additional error signal			0 mA	
<u>Safety shutdown can be activated with "jumper" (terminals 81/82)</u>				
			electrically isolated from bus circuit and binary input	
• Input resistance			> 20 k $\Omega$	
• Signal state "0" (shutdown active)			0 ... 4.5 V or unconnected	
• Signal state "1" (shutdown not active)			13 ... 30 V	
For connecting to power supply with the following peak values				
			$U_i = 30 \text{ V}$ $I_i = 100 \text{ mA}$ $P_i = 1 \text{ W}$	"nA": $U_n \leq 30 \text{ V}$ $I_n \leq 100 \text{ mA}$ "ic": $U_i = 30 \text{ V}$ $I_i = 100 \text{ mA}$
Effective Internal capacitance and inductance	-	-	Negligibly	Negligibly
Binary input BE1 for PROFIBUS (terminals 9/10); electrically connected to the bus circuit				
Electrical isolation				
• For basic device without Ex protection and for basic device with Ex d	Electrical isolation between basic device and the input for safety shutdown, as well as the outputs of the option modules			
• For basic device Ex "ia"	The basic device and the input to the safety shutdown, as well as the outputs of the option modules, are separate, intrinsically safe circuits.			
• For basic device Ex "ic", "nA", "t"	Electrical isolation between basic device and the input for safety shutdown, as well as the outputs of the option modules			
Test voltage			840 V DC, 1 s	
<b>PROFIBUS PA communication</b>				
Communication	Layers 1 and +2 according to PROFIBUS PA, transmission technology according to IEC 61158-2; slave function; layer 7 (protocol layer) according to PROFIBUS DP, EN 50170 standard with the extended PROFIBUS functions (all data acyclic, manipulated variable, feedbacks and status also cyclic)			
C2 connections	Four connections to master class 2 are supported; automatic connection setup 60 s after break in communication			
Device profile	PROFIBUS PA profile B, version 3.02, more than 150 objects			
Response time to master message	Typically 10 ms			
Device address	126 (when delivered)			
PC parameterization software	SIMATIC PDM; supports all device objects. The software is not included in the scope of delivery.			

## Positioners

### SIPART PS2

#### Technical specifications

	Basic electronics without Ex protection	Basic electronics with Ex d explosion protection	Basic electronics with "ia"explosion protection	Basic electronics with explosion protection "ic", "nA", "t"
<b>FOUNDATION Fieldbus communication</b>				
Communications group and class	According to technical specification of the Fieldbus Foundation for H1 communication			
Function blocks/Functions	Group 3, Class 31PS (Publisher Subscriber) 1 Resource Block (RB2) 1 Analog Output Function Block (AO) 1 PID Function Block (PID) 1 Transducer Block (Standard Advanced Positioner Valve) Link Active Scheduler (LAS)-Funktion			
Execution times of the blocks	AO: 30 ms PID: 40 ms			
Physical layer profile	123, 511			
FF registration	Tested with ITK 6.0			
Device address	22 (when delivered)			

## Option modules

	Without Ex protection/ with Ex protection Ex d	With explosion protection "ia"	With explosion protection "ic", "nA", "t"
<b>Alarm module</b>	<b>6DR4004-8A</b>	<b>6DR4004-6A</b>	<b>6DR4004-6A</b>
3 binary output circuits		<ul style="list-style-type: none"> <li>Alarm output A1: Terminals 41 and 42</li> <li>Alarm output A2: Terminals 51 and 52</li> <li>Alarm output: Terminals 31 and 32</li> </ul>

<b>Actuator type</b>			
For part-turn actuators, glass fiber-reinforced polyester magnet holders <sup>1)</sup>	1		
For linear actuators up to 14 mm (0.55 inch) <sup>2)</sup>	2		
For linear actuators > 14 ... 130 mm (0.55 ... 5.12 inch) <sup>3)</sup>	3		
For part-turn actuators, anodized aluminum magnet holders <sup>1)</sup>	4		
<sup>1)</sup> Fitted with mounting console, available for order separately as accessory. <sup>2)</sup> Mounted with individual mounting solution. Only a NAMUR mounting bracket can be used as mounting base (order separately as accessory). <sup>3)</sup> Mounted with NAMUR interface. Article No. either 6DR4004-8V or 6DR4004-8V + 6DR4004-8L depending on stroke range. Or mounted without NAMUR interface, individual mounting solution. Article No. 6DR4004-8VK or 6DR4004-8VL can be used as individual mounting solution depending on the stroke range.			

## Positioners

### SIPART PS2

#### Selection and Ordering data Accessories/Spare parts

##### Mounting kit for other part-turn actuators

The following mounting consoles can be used together with the NAMUR part-turn actuator mounting kit 6DR4004-8D.

- SPX (DEZURIK) Power Rac, sizes R1, R1A, R2 and R2A
- Masoneilan Camflex II
- Fisher 1051/1052/1061, sizes 30, 40, 60 to 70
- Fisher 1051/1052, size 33

**TGX:16152-328**

**TGX:16152-350**

**TGX:16152-364**

**TGX:16152-348**

##### Mounting kit for NAMUR linear actuators

- NAMUR linear actuator mounting kit with short lever (2 ... 35 mm (0.08 ... 1.38 inch))
- Long lever for travels from 35 ... 130 mm (1.38 ... 5.12 inch) without NAMUR mounting bracket
- Reduced mounting kit (like 6DR4004-8V but without fixing angle and U-bracket), with short lever with up to 35 mm travel (1.38 inch)
- Reduced mounting kit (like 6DR4004-8V but without fixing angle and U-bracket), with long lever with > 35 mm travel (1.38 inch)
- Roll and disk made of stainless steel 316 for replacement of the Teflon roll and aluminum disk in the 6DR4004-8, -8VK and -8VL mounting kits for NAMUR linear actuators
- Two terminal strips made of stainless steel 316 for replacement of the aluminum terminal blocks in the 6DR4004-8V, -8VK and -8VL mounting kits for NAMUR linear actuators

**6DR4004-8V**

**6DR4004-8L**

**6DR4004-8VK**

**6DR4004-8VL**

**6DR4004-3N**

**6DR4004-3M**

##### Mounting kit for other linear actuators

- Masoneilan type 37/38, size 6 to 51 mm (<2 inch)
- Masoneilan type 87/88
- Masoneilan type 37/38, size 51 to 254 mm (>2 inch)
- Fisher type 657/667, size 30 to 80
- Samson actuator type 3277 yoke dimension = 101 mm (integrated connection without tube), not for Ex d

**TGX:16152-595**

**TGX:16152-1210**

**TGX:16152-1215**

**TGX:16152-110**

**6DR4004-8S**

##### OPOS Interface according to VDI/VDE 3847

- OPOS adapter with interface VDI/VDE 3847, blanketing, not for flameproof enclosures
- OPOS/NAMUR mounting kit with short lever for installation according to NAMUR or integrated installation without pipe

**6DR4004-5PB**

**6DR4004-5PL**

**Connection block**, for safety solenoid valve with extended mounting flange to NAMUR

- For mounting to IEC 534-6
- For SAMSON actuator (integrated mounting) see above

**6DR4004-1B**

**6DR4004-1C<sup>1)</sup>**

##### Documentation

The entire documentation is available for download free-of-charge in various languages at:

<http://www.siemens.com/processinstrumentation/documentation>

SIPART PS2 Compact Instruction Manual

- English, French, German, Spanish, Italian, Dutch

**A5E03436620**

- Estonian, Latvian, Lithuanian, Polish, Romanian, Croatian

**A5E03436655**

- Bulgarian, Czech, Finnish, Slovakian, Slovenian

**A5E03436664**

- Danish, Greek, Portuguese, Swedish, Hungarian

**A5E03436683**

SIPART PS2 device documentation

- DVD with complete documentation for all device versions

**A5E00214567**

##### SITRANS I100 output isolator HART

(see "SITRANS I supply units and isolation amplifiers") with

- 24 V DC auxiliary power

**7NG4124-0AA00**

##### SITRANS I200 output isolator HART

(see "SITRANS I supply units and isolation amplifiers") with

- 24 V DC auxiliary power

**7NG4131-0AA00**

##### HART modem for connecting to PC or laptop

- with USB interface

**7MF4997-1DB**

<sup>1)</sup> Only together with 6DR4004-8S

##### Scope of delivery for positioner

- 1 SIPART PS2 positioner as ordered
- 1 DVD with the complete documentation for all versions and accessories
- Getting Started "SIPART PS2 – Operation - a concise overview"

#### Selection and ordering data

Article No.

##### NCS-Sensor spare parts

Magnet holder made of fiberglass-reinforced polyester including magnet for non-contacting position detection for part-turn actuators

**A5E00078030**

Magnet holder made of anodized aluminum including magnet for non-contacting position detection for part-turn actuators

**A5E00524070**
